## Projects

### SFS IMPLEMENTATION

20 Months

As a Salesforce Developer, I was involved in implementing and customizing Field Service Lightning (FSL) to optimize service delivery for a UL organization. My responsibilities included configuring service territories, building work order management processes, developing custom solutions with Apex and Lightning Web Components (LWC), and integrating FSL with external systems using REST APIs. I also automated workflows, enabled mobile workforce management, and ensured high SLA adherence through skill-based routing and proactive scheduling.
