## Professional Summary

Experienced Salesforce Developer with expertise in Salesforce administration, Apex development, and process automation. Skilled in building and optimizing Lightning Flows and developing custom Apex triggers, classes, and batch processes to meet business needs. Possesses moderate experience in Lightning Web Components (LWC) for creating interactive user interfaces. Proficient in REST API integrations, Formstack document automation, and complex data migrations using Data Loader and Workbench. Experienced in managing deployments using tools like GearSet, and Change Sets. Adept at configuring SSO solutions with Microsoft Azure and delivering scalable, efficient solutions to enhance platform performance.

## Experience

08/2023 - 12/2024

Software Engineer — Salesforce, **TechnoMile**, Nagpur, Maharashtra

**Company Overview:** TechnoMile helps IT teams at GovCon, aerospace and defence, and other types of federal contractors safeguard their organisations data, rapidly adapt their technology investments to meet evolving business needs, and connect enterprise systems.

- Managed Salesforce administration, including user management, security settings, and reports/dashboards.
- Designed various Lightning Flows (Screen, Record-Triggered, Auto-Launched) to automate business processes.
- Developed Apex triggers, classes, and batch jobs for custom functionality.
- Built basic Lightning Web Components (LWC) to enhance user interfaces.
- Integrated Google REST APIs for seamless system communication.
- Configured Formstack Documents with dynamic field mapping for automated document generation.
- Executed complex data migrations using tools like Data Loader, Salesforce Inspector and Workbench.
- Planned and handled deployments with Change Sets, and Gear Set.

09/2020 - 08/2023

Engineer - Salesforce, **Vyom Labs**, Pune, India

**Company Overview:** It is uses IT Service Management to provide the Incident, Problem, Change and Asset Management and its service catalogues to their end users.

- Customised Salesforce applications to meet business needs, including validation rules, reports, and dashboards for monthly, quarterly, and yearly insights.
- Developed custom business logic using Apex classes and SOQL for back-end data handling.
- Built Lightning Flows to summarise issue occurrence counts from related incidents.
- Created LWC components with pagination, search functionality, and wire services to display Configuration Items and calculate risk impacts using imperative Apex.
- Developed Apex Triggers for automated processes, including queue mapping,

application creation, and owner assignments.

- Integrated REST APIs for third-party applications like SailPoint and Automic for incident creation and access provisioning.
- Implemented Batch Apex and Scheduled Apex to auto-close records pending approval for over 45 days with custom filters.
