GAURAVA DIKSHITA

SALESFORCE DEVELOPER | NOIDA, UTTAR PRADESH|

SKILLS

- Salesforce Admin
- Apex
- Trigger
- LWC
- Aura Component
- Visualforce Page
- JavaScript
- HTML
- Salesforce Integration

CERTIFICATION

SALESFORCE CERTIFIED PLATFORM DEVELOPER 1

Certificate Id: 2640176

2022-10-16 – Present

EXPERIENCE

Software Developer
Mindtears
(**Aug 2024- Present**)

Jr Salesforce Developer
Techforce Services
(**June 2023 – July 2024**)

Salesforce Developer
Girikon Solution Pvt. Ltd.
(**July 2021 – Feb2023**)

PROJECTS

Academy Sales Process

I worked on the Academy Sales Processes, where I implemented Web-to-Lead processes and worked with both Standard Objects like Lead and Opportunity and Custom Objects such as Discount and Voucher to meet specific business needs. I created Custom Fields, Flows, and Follow-Up Tasks to streamline operations and managed deployments using Change Sets. To automate complex tasks, I developed Apex Classes and Triggers. Additionally, I integrated Salesforce with Whautomate for seamless communication and Razorpay to send payment links and generate invoices, enhancing overall efficiency.

DMSP (Dependent Multi Select Picklist)

The DMSP component allows users to select multiple controlling field values and link them to various dependent field values, overcoming Salesforce's single-select restriction. This powerful mapping system ensures accurate data entry and simplifies setting up field dependencies. For this project, I worked on the LWC and it is available on the AppExchange.

TMT (Test Management Tool)

TTMT is test management tool which enables users to use it for testing purpose. We have created related objects like project, test plan, Release, Test case, Test cycle, Test run and Defect. Whole project is to track testing progress and to minimize defect. Whole project is developed in lightning web component. We have also implemented flows, apex triggers, and email notifications. The whole project has been implemented to ease the processes of testing.

Smurfit Kappa

I designed and developed custom objects, tabs, custom metadata and Aura components to Automate business logic, ensuring streamlined operations. I implemented object-level and field-level permission for various profiles based on organizational hierarchy requirements & created custom metadata along with the page layouts to control access to certain fields. Using Lightning Components, I also created a quick action. I have also done deployment work on a project.

Project Management

Designed and automated a comprehensive Project Management solution integrated with a company portal, leveraging Flows, Triggers, and LWC to manage task effectively. This included tracking assigned tasks, monitoring time spent, estimating remaining time, and managing pending tasks. Built a Leave Management Portal within Experience Cloud, seamlessly integrated with the project management system to handle leave requests and approvals. Developed a dynamic Quiz Maker with typing functionality using LWC and Apex Controller. Additionally, created a Contact Management tab on the Account detail page with full edit, view, and delete functionality, ensuring seamless user interaction and efficient data management.
.

SMP & CRP APP

Developed a Student Management Portal app to manage student, faculty, and course data, and a Candidate Recruitment Process app using LWC. Worked with Standard and Custom Objects, Record Types, Page Layouts, Validation Rules, Reports & Dashboards, and automated processes with Flows, Apex Classes, and Triggers to enhance efficiency and user experience.

EDUCATION

M.C.A. (MASTER OF COMPUTER APPLICATIONS)

Galgotia's College of Engineering & Technology, Greater Noida. (July 2018-Aug 2021
